

# Donchian Breakout Strategy Report

## Strategy Hypothesis

The Donchian Breakout Strategy is designed to capture strong price movements in Bitcoin by entering trades when several technical conditions align. The core idea is to trade breakouts above or below a 40-day Donchian Channel, but only when other signals confirm that a meaningful trend is underway. These signals include a price above or below the 200-day SMA (indicating long-term trend direction), an ADX value greater than 25 and rising (showing strong trending behavior), an RSI above or below 50...

## Performance Metrics

- Total Trades: 14
- Winning Trades: 7
